

Partnership celebrates anniversary: GÖPEL electronic congratulates DSE Test Solutions on their 15 year alliance

Partnerships have always had a high priority at GÖPEL electronic, especially to drive the development of new technologies. The cooperation with a Danish company now celebrates its fifteenth anniversary.

In 2004 GÖPEL electronic entered into a comprehensive partnership with Dansk System Elektronik A/S (DSE). Under this agreement, DSE, headquartered in Horsens, Denmark, became the ninth Center of Expertise (COE) worldwide. This included membership in the "GÖPEL electronic Alliance Partner Network", in which numerous specialists around the globe provide worldwide customer support. Since then, DSE has offered customers in Scandinavia comprehensive support in the area of Embedded JTAG Solutions, for example in Design for Testability (DFT), the development of test programs and the delivery of integration solutions into other test systems.

Thomas Wenzel, co-founder of GÖPEL electronic and responsible for the Embedded JTAG Solutions division, is particularly proud of the anniversary: "We felt early on that the Danish market would be important for us. The demanding technological tasks could only be implemented so successfully through close cooperation with our partner DSE. Together, we have driven forward and implemented numerous developments. The services provided by DSE were and are enrichment for our product range of highly efficient hardware and software tools. With our test and programming solutions we are able to meet the requirements of the Danish and Scandinavian markets and to offer our customers a shorter time-to-market." Thomas Wenzel is also optimistic with regard to the future: "The rapid technological developments are a major task that has to be mastered. We are sure that the close cooperation will enable us to continue to be a pioneer for leading test strategies and accompanying equipment in the Scandinavian region".

An important factor of the alliance from the beginning was the collaboration of EP-TeQ from Aarhus, Denmark. EP-TeQ is the official distributor for Embedded JTAG Solutions and Inspection Solutions from GÖPEL electronic and has many years of experience in the field of measurement and testing technology. Both DSE and EP-TeQ are not known as pure system suppliers but as providers of comprehensive customer support and consulting.

GÖPEL electronic is a world-class vendor of Embedded JTAG Solutions and pioneer of JTAG/Boundary Scan technologies according to Std. IEEE 1149.1. The product portfolio includes the high performance software SYSTEM CASCON as well as an extended range of well-proven hardware products. It allows testing, programming and verification of electronic components and PCBs in development and production. This includes programming of microprocessors and further complex components such as FPGAs or BGAs at highest speeds. The GÖPEL electronic philosophy
